Introduction

This document contains release notes for op5 Statistics 3.0. The document is intended to give brief information about the new release. It is directed towards staff responsible for managing op5 products.

What's New

Update to latest Cacti and Spine

We update to latest version of Cacti and the poller spine that previously was called cactid. This fixes a lot of small bugs and also improves the performance of polling slightly.

“Plugin framework”

We have added the rather large “plugin framework” patch which makes it easy to extend the functionality of op5 Statistics. More about this on Network Weathermap.

Network Weathermap

We have added the plugin, network weathermap, which is basically a drawing tool for your network that integrates nicely with the graphs that is available in op5 Statistics. Its a really good tool for visualization of network's and link utilization.

Installation and Upgrade Notes

At least op5 Statistics 2.10 is required for upgrading.

Documentation

For upgrading and installing version 3.0 of op5 Statistics please see the manual on <http://www.op5.com/support/>
